Angular

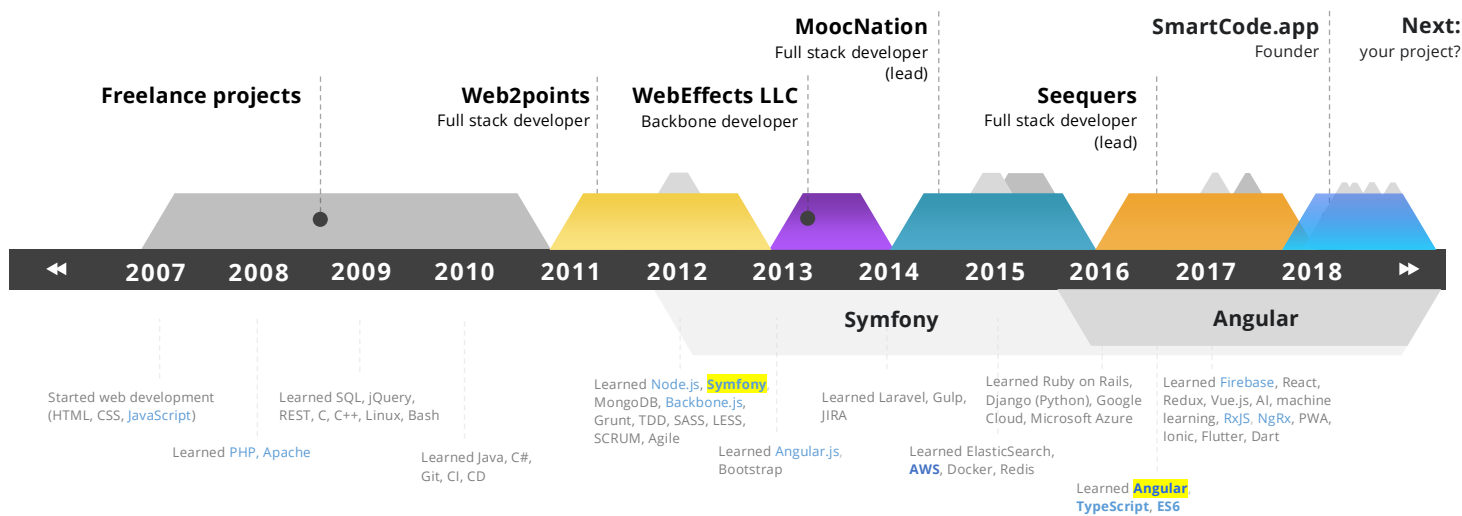

Symfony

A skilled and motivated developer with 11 years of web development experience. I am a real team player and come to you with a strong background in both front end and back end development. I have worked remotely with startups and fast-moving big companies mostly from the US and

designed scalable software infrastructures. I led remote development teams and often worked alone too. I am a detail-oriented, problem solver person who learns fast and has a good understanding of software development best practices and the latest web technologies

WHAT'S MY STORY

- Crossfit, gym
- Krav maga

EDUCATION

Software Engineer BSc
University of Pannonia

LATEST BIG PROJECTS

2017 - 2018

Remote

Founder / SmartCode.app

SmartCode.app is an online digital agency specializing in modern web applications that are real-time and interactive, using cloud technologies and cutting-edge web frameworks

Technologies:

Symfony, Angular, Angular Material, RxJS, NgRX, ElasticSearch, Firebase, Serverless, Node.js (with TypeScript), Amazon Web Services, Google Cloud, Ionic, Flutter, Vue.js, JIRA, GitHub, APIs, Artificial Intelligence, Bootstrap, REST, GraphQL, PWA, Laravel, CloudFlare

2016 - 2017

Remote

Full Stack Developer (lead) / Seequers

Seequers is a Facebook-like social platform, bringing people, information, and personal experiences together across a global health, wellness and self-care community. This complex project that I led included a lot of Facebook-like features like timelines, push notifications, friendships, liking, sharing, instant messaging, communities, commenting system, subscriptions, reviews, open/closed groups and many more. Seequers also features an intelligent personalized recommendation engine powered by ElasticSearch. This was a big project which required hundreds of thousands of lines of code on top of the frameworks and integrations with 3rd party tools and services.

Technologies:

Symfony, Angular, Amazon Web Services, ElasticSearch, Node.js, REST API, Backbone.js, JIRA, GitHub, Sendgrid, AWS EC2, S3, RDS, Ubuntu, D3 graph visualization, Docker, Redis, Facebook/Google/Twitter API, OAuth, Pusher, Webpack

2014 - 2016

Remote

Full Stack Developer (lead) / MooNation

I led the development of MooNation which was a MOOC (Massive Open Online Course) aggregator platform with thousands of online courses and a social platform for students to collaborate and share study materials. The project was designed as a singlepage-application where the frontend had most of the application logic (including templating, routing, etc.) and only used the backend server through a RESTful API. The MooNation project involved dozens of important 3rd party tools and API integrations.

Technologies:

Symfony, Angular.js, Backbone.js, Node.js, REST API, Docker, Amazon Web Services, ElasticSearch, GitHub, Jenkins CI

PERSONAL DETAILS

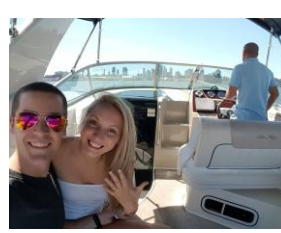

I live in Budapest, Hungary and work remotely mostly for US companies (full time/part time/contract) in the EST and CET time zones
